15181	<i>Guyramemua affine</i>	<i>Guyramemua affine</i>	Chapadafluesnapper	Chapada Flycatcher		(Burmeister, 1856)	SA : se Brazil, e Bolivia		ENG, TAX, PHY	
15182	<i>Sublegatus</i>	<i>Sublegatus</i>	<i>Sublegatus</i>	<i>Sublegatus</i>	<i>Sublegatus</i>	Sclater, PL & Salvin, 1868				Change English name of Chapada Suiriri to Chapada Flycatcher (SACC). Nomenclatural change for the species epithet is required after an examination of the type series of <i>affinis</i> showed that it is actually referable to Chapada Flycatcher. <i>S. islerorum</i> Zimmer et al., 2001 becomes a junior synonym. Recent phylogenetic studies show that Chapada Flycatcher is not a member of <i>Suiriri</i> , but rather is sister to <i>Sublegatus</i> . Assigned to <i>gen. nov. Guyramemua</i> : Lopes et al., 2017, which is neuter, requiring agreement in the spelling of the species epithet from <i>affinis</i> to <i>affine</i> (Lopes et al. 2017).

										The family Vangidae was historically restricted to a diverse and monophyletic set of Madagascan taxa. Molecular analyses support expansion of the family Vangidae to include the helmetshrikes (Prionopidae), woodshrikes and allies (Tephrodornithidae), and shrike-flycatchers (<i>Megabyas</i> and <i>Bias</i> , previously placed in the Platysteiridae) (Reddy et al. 2012; Jønsson et al. 2012, 2016; Fuchs et al. 2012; H&M 4; HBW).

Grey-throated Minivet *Pericrocotus montanus* (including *cinereigula*) is split by HBW/Birdlife but variation in throat color is equally pronounced in some other subspecies and differences in vocalizations and mtDNA is limited (Eaton et al. 2021).

Change English name of *Pericrocotus flammeus* to Orange Minivet with split of *P. speciosus*, which assumes English name "Scarlet Minivet". *Pericrocotus speciosus* is split from *P. flammeus* (Rasmussen & Anderton 2005).

18789	<i>Colluricincla tenebrosa</i>	<i>Colluricincla tenebrosa</i>	Palau Tornskadedrossel	Sooty Shrikethrush	Rußdickkopf	(Rothschild, 1911)	AU : montane wc to ec New Guinea		TAX, SSP	Placement of Sooty Shrikethrush (Sooty Whistler) in <i>Colluricincla</i> rather than <i>Pachycephala</i> follows Dickinson (2003:489, footnote 2). With the transfer of Morningbird to <i>Pachycephala</i> from <i>Colluricincla</i> as <i>P. tenebrosa</i> (Hartlaub & Finsch, 1868), Sooty Shrikethrush, formerly <i>C. umbrina</i> (Reichenow, 1915), is no longer preoccupied by the name of Hartlaub & Finsch, 1868 and reverts to its senior name <i>C. tenebrosa</i> (Rothschild, 1911). Includes <i>atra</i> ; treat as monotypic (Beehler & Pratt 2016). Little Shrikethrush complex includes at least 8 separate clades (Deiner et al. 2012; Beehler & Pratt 2016; Marki et al. 2018; Schodde pers. comm.). Rename (9.2) Little Shrikethrush to Arafura Shrikethrush after revision of this species complex.
18790	<i>Colluricincla megarhyncha</i>	<i>Colluricincla megarhyncha</i>	Rødbrun Tornskadedrossel	Arafura Shrikethrush	Walddickkopf	(Quoy & Gaimard, 1832)	AU : New Guinea and nc Australia		AS, ENG	
18791	<i>C. m. megarhyncha</i>	<i>Colluricincla megarhyncha megarhyncha</i>	Rødbrun Tornskadedrossel		Waldpitohui	(Quoy & Gaimard, 1832)	Raja Ampat Is. (nw of New Guinea), Bird's Head (nw New Guinea) to head of Cenderawasih Bay and adjacent sw New Guinea plain		SSP, ENG	Nominate ssp. of Arafura Shrikethrush includes <i>misoliensis</i> , <i>ferruginea</i> and <i>palmeri</i> (Beehler & Pratt 2016) also <i>batantae</i> (Schodde pers. comm.).
18792	<i>C. m. parvula</i>	<i>Colluricincla megarhyncha parvula</i>	Lille Tornskadedrossel		Goulds Waldpitohui	Gould, 1845	ne WA and Top End, n NT (nw Australia e to w Gulf of Carpentaria)			
18793	<i>C. m. aruensis</i>	<i>Colluricincla megarhyncha aruensis</i>	Aru Tornskadedrossel		Aru-Waldpitohui	(Gray, GR, 1858)	Aru Is. (sw of New Guinea) and Trans-Fly (sc New Guinea)		SSP	Add <i>contra</i> Beehler & Pratt (2016; Schodde pers. comm.).
18794	<i>Colluricincla fortis</i>	<i>Colluricincla fortis</i>	Goodenough Tornskadedrossel	Variable Shrikethrush	Salomonense-Dickkopf	(Gadow, 1883)	AU : e, se New Guinea and se satellites		AS	Variable Shrikethrush is split (9.2) from Arafura (Little) Shrikethrush (Marki et al. 2018).
18795	<i>C. f. fortis</i>	<i>Colluricincla fortis fortis</i>	Goodenough Tornskadedrossel		Gadows Waldpitohui	(Gadow, 1883)	D'Entrecasteaux Arch. (e of se New Guinea)			
18796	<i>C. f. trobriandi</i>	<i>Colluricincla fortis trobriandi</i>	Trobriand Tornskadedrossel		Trobriand-Waldpitohui	(Hartert, E, 1896)	Trobriand Is. (e of se New Guinea)		SSP	<i>C. f. trobriandi</i> was formerly included in ssp. <i>fortis</i> (Beehler & Pratt 2016) but recognized by Schodde (pers. comm.). <i>C. f. despecta</i> includes ssp <i>superflua</i> and <i>neos</i> (Schodde, pers. comm.). The latter was previously included in <i>C. m. madaraszii</i> (Beehler & Pratt 2016), but genetic evidence aligns it with <i>fortis</i> (Marki et al. 2018).
18797	<i>C. f. despecta</i>	<i>Colluricincla fortis despecta</i>	Angabunga Tornskadedrossel		Südküsten-Waldpitohui	(Rothschild & Hartert, E, 1903)	se New Guinea w in the n to the Huon Gulf and in the s to the upper Fly-Digul Rivers		SSP	Monotypic Waigeo Shrikethrush is split (9.2) from Arafura (Little) Shrikethrush (Marki et al. 2018).

(s Moluccas), s New Guinea and ne WA to ne QLD (n Australia)		TAX	<i>Myiagra ruficollis</i> includes <i>M. fulviventris</i> as a subspecies (Dickinson 2003). When treated as a full species, <i>M. fulviventris</i> was formerly known as "Tanimbar Flycatcher", not to be confused with <i>Ficedula riedeli</i> with which the English name Tanimbar Flycatcher is currently assigned.

Scientific Name	Scientific Name	Dansk Navn	Engelsk navn	Tysk Navn	Authority	Breeding Range	Nonbreeding Range	Code	Comment
									Recent phylogenetic analyses have shown that <i>Platylophus</i> is not a true corvid (Corvidae), but rather has an unsettled position within the Corvoidea radiation (Jönsson et al. 2008, Aggerbeck et al. 2014, Winkler et al. 2015; Oliveros et al. 2019; Jönsson et al. 2011; Jönsson et al. 2016, Fuchs et al. 2019; Stervander et al. 2020). Best placed in its own family Platylophidae which has been recently formally described (Gaudin et al. 2021). However, an alternate name for this family, Lophocitidae, may have precedence depending on whether Lophocitidae Kaup, 1855 is interpreted as having been originally introduced as a family-group name or as a genus-group name (Gaudin et al. 2021; Raty in litt. 9/10/21, Bird Forum https://www.birdforum.net/threads/crested-jay.323243/page-2).

20473	<i>L. s. superba</i>	<i>Lophorina superba superba</i>	Kræveparadisfugl		Kragenparadiesvogel	(Pennant, 1781)	Kobowre (=Weyland Range, wc New Guinea) to Yuat-Strickland Rivers Divide (ec New Guinea)		SSP, TAX	The species group epithet <i>superba</i> has been traditionally associated with the <i>Lophorina</i> of the Vogelkop Peninsula. However, the type specimen is lost and its taxonomic identity may be controversial. For this reason a neotype has been recently chosen to fix application of <i>superba</i> Pennant to the population of <i>Lophorina</i> that Daubenton's plate 632 in his Planches Enluminées (1765–1781) most closely and most likely depicts: the western cordillera form. With this neotypification, <i>superba</i> Pennant, 1781 replaces <i>feminina</i> Ogilvie-Grant, 1915 which becomes a synonym. Use of Pennant, 1781 rather than Forster, 1781 for the author of <i>superba</i> follows the authors of the neotypification. See Irestedt et al. (2017). However, Elliott et al. (2020) argue that this neotypification is neither required nor justified and, as such, this revised nomenclature of the <i>Lophorina</i> complex should be rejected in favour of traditional usage.
